

WE ARE CURRENTLY ABLE TO OFFER THE FOLLOWING PRODUCTS FOR USE WITH THE EXPRESS BLOWER:

BARK • COMPOST • SAWDUST • WOODCHIP • MULCH BLENDS

With our Express Blower Service, we can efficiently deliver and spread large quantities of organic material up to 10 times more efficiently than a typical five-man squad. Materials can be applied in any weather with little damage to the landscape compared to the high traffic of workers and wheelbarrows.

FRM can efficiently deliver the products and provide the services you need to complete your next project.

ABOUT US...

Forth Resource Management (FRM) is a company specialising in the management of source segregated organic material collected throughout Southern Scotland by local authorities and private organisations.

Producing over 30,000 tonnes per annum of peat-free soil improving compost, FRM manufacture a large range of compost-based products for sale into the agricultural, horticultural and sports turf industries. In addition the Caledonian Horticulture Range of peat-free garden products caters for the landscaping and domestic garden market.

In 2010 FRM won the prestigious Jim Balance Composting Award from the Association of Organics Recycling in recognition of its compost product development work and in 2013 FRM was awarded the Source Segregated Compost and Digestate Marketing Award. To add value to the range of products produced and available to FRM an Express Blower System has been introduced to increase the opportunities and services offered.

EXPRESS BLOWER TRUCK

CLEAN, SAFE, FAST & EFFICIENT DELIVERY

• COMPOST • MULCH BLENDS • BARK • WOODCHIP • SAWDUST

www.caledonianhorticulture.co.uk

AN EXPRESS BLOWER IS A PNEUMATIC DELIVERY SYSTEM WHICH ENABLES PRODUCT OR MATERIAL TO BE BLOWN THROUGH A LARGE CAPACITY HOSE AND APPLIED TO THE GROUND IN A CONTROLLED MANNER LEAVING A SMOOTH PROFESSIONAL FINISH.

It can also be used to deliver products into a desired location i.e. a biomass boiler room, in a fast efficient manner.

The unit can carry over 100m of flexible hose allowing areas to be accessed which may have been inaccessible in the past. The unit does not tip like some, instead the product is brought to the rear of the trailer using a hydraulically driven walking floor, helpful in areas where access is restricted.

Operated by one person with a remote control, the Express Blower allows quick and efficient spreading of large quantities of organic materials such as compost, bark and woodchip to the remotest locations.

The Express Blower saves valuable time and labour costs. It will spread five times what a 5 person squad can do in one day. It will also allow you to reduce your overall cost of spreading materials and eliminate unnecessary employee risk.

ADVANTAGES OF EXPRESS BLOWING...

FAST Output of up to 50 square meters per hour depending on material type, the large capacity hose ensures constant even flow

CLEAN The material is contained in the trailer and only output is through the hose to its desired location

SAFE The blower can be remotely controlled giving the operator flexibility as to how much product and/or air is being applied.

EFFICIENT Express blowing is the most cost effective and most adaptive in delivering material to hard to reach places

APPLICATIONS...

COMPOST BLANKETS

Using PAS100 compost, a blanket can be easily installed using the Express Blower. A compost blanket is a layer of loosely applied compost or composted material that is placed on the soil in disturbed areas to control erosion and retain sediment resulting from sheet-flow runoff. It can be used in place of traditional sediment and erosion control tools such as mulch, netting, or chemical stabilisation. When properly applied, the erosion control compost forms a blanket that completely covers the ground surface.

FILTREXX SOXX/EROSION CONTROL

Forth Resource Management has a sub-division, Filtrexx North. Filtrexx is a proven green technology that uses compost and other natural products in a mesh containment system to create low impact engineering and filtration solutions used in over 100 different applications.

FRM specialise in compost, soil and growing media blends produced from sustainable sources. We can provide a wide range of fillings for Filtrexx soxx to suit a variety of applications. The Express Blower enables soxx to be filled on slopes or any area where damage by heavy plant is undesirable. Seed can also be added to the growing media allowing rapid establishment.

BIOMASS BOILERS

Biomass boiler rooms can be easily filled using the Express Blower. FRM can supply woodchip to the required standard, transport, deliver and fill boiler rooms as required. The walking floor allows a constant flow of woodchip at all times without the need to tip the trailer.

OVERSEEDING

When renovating or replacing lawns the Express Blower blows a layer 1-2 cm on the existing lawn. This permits the existing lawn to keep growing. The layer which is blown on top of it is solely meant to sow damaged parts of the lawn and to feed it.

BARK/MULCH SPREADING

Hardwood and softwood wood mulch have never been applied more effortlessly leaving a smooth, professional finish - the look of the blown material is unrivalled. The quality of the product which is used combined with the total blow distance set the capacity of the Express Blower. This varies from 3m³ to 40m³ per/hour depending on the location and material being blown.

With the remote control, the volume of output can be adjusted quickly to a minimum flow for spreading around delicate flowers or turned up higher in more wide open areas.

FRM have developed unique mulch blends which greatly reduce the cost of standard bark spreading. With the ever-increasing cost of bark, large areas become expensive very quickly. Using the mulch blends this cost can be reduced by at least 50% and combined with the Express Blower, a cost effective and efficient combination of product and service is possible.

ANIMAL ENCLOSURES

Whether it be sawdust, mulch blends or woodchip for animal enclosures or arenas the Express Blower can blow directly into the required area with ease. Large outdoor areas or small compact indoor boxes can all be easily accessed and completed in a clean and efficient operation.

SAFETY SURFACES

Having over 100m of flexible hose the Express Blower is the most cost effective solution to ensure enclosed areas can be accessed. More often than not play areas can be contained inside a park making access for plant and equipment difficult. Hoses can be deployed and run over fences, walls, bridges and along footpaths with little or no inconvenience.
